

# EUSTON WIND FARM FACT SHEET

## About the site

The proposed site is located 8km north of Euston, NSW within the Balranald Local Government Area (LGA). The proposed site lies within the South-West Renewable Energy Zone (SW-REZ) and would contribute significantly to the NSW Government's net-zero emissions by 2050 target.

## Proposal overview

DP Energy Australia Pty Ltd is exploring the opportunity of a wind farm in the Euston area and is currently undertaking the beginning phases of scoping for the proposed development. The proposed wind farm will include a Battery Energy Storage System (BESS). The energy created through the wind farm will be stored within the BESS and fed directly into the energy grid.

The proposed Euston Wind Farm would include:

- Approximately 100 wind turbines exporting power to the national electricity market (NEM)
- Associated infrastructure such as roads, drainage, cabling and substations
- Battery energy storage systems (BESS)
- Associated construction facilities
- Operations and maintenance facilities

Input from the community over the coming months will help formulate the Scoping Report. The Scoping Report will determine which technical assessments will be included within the Environmental Impact Statement (EIS) and is part of the early stage in the process of a development proposal.

## Key Benefits

### Clean energy generation

The wind farm could generate the equivalent of the amount of electricity it takes to power 324,903 NSW homes.

### Clean energy storage

Provides reliable power for homes and businesses and brings stability to electricity network.

### Income for the local area

The proposed wind farm would create jobs, diversify income and increase revenue to local services such as food, lodging and tourism.

### Community Benefit Schemes (CBS)

Ongoing benefits for the local community would be available through a CBS.

## About the developer

DP Energy is an international renewable energy company that specializes in developing sustainable and environmentally friendly renewable energy projects. DP Energy Australia Pty Ltd – the Australian subsidiary of the global DP Energy company headquartered in Cork Ireland – was founded in 1992 and is responsible for the Euston Wind Farm Proposal.
